Introduction to the Statistical Software Package R

COURSE INFORMATION

This short course aims to equip participants with the skills necessary to utilise the R-software package to address various data problems using programming techniques. The participant will develop the basic programming skills related to programming syntax, R data structures, and R-specific functions required for advanced data analysis. Example data sets and case studies will be used to illustrate these concepts. By the end of the course, the participant should have the necessary skills to comfortably translate data analysis algorithms into R code and then to execute this code.

23, 24 and 25 January 2019
