Home to the largest Zebra fish bioassay facility in Africa

The Water research group in the Unit for Environmental Sciences and Management (UESM) at the North-West University (NWU) installed the National Aquatic Bioassay Facility (NABF) in September 2017. Not only is the 515m² facility the largest Zebra fish bioassay facility in Africa, but it is also the second largest in the southern hemisphere.

The installation was funded by the National Research Foundation National Nanotechnology Equipment Programme, equipped with the Tecniplast holding system technology, and the installation successfully instated by Labotec. A paper announcing this was recently published by Debbie Shaw in the Analytical Reporter 2018, pp 4 –4.
